

**History**  
 Poverty and poor hygiene are the major causes of jiggers. To completely eradicate jiggers, Ahadi Kenya Trust has been undertaking different activities to change the lives of those affected. The activities include; identifying those infested with jiggers, intervention methods, training and educating the community, empowering the communities and finally rehabilitating the victims back to normal lives. Through all this activities, the main objective is to eradicate poverty, reverse and halt the spread of jiggers.

**Rehabilitation**  
 With income and food security, the recovered jigger survivors are able to lead a normal life. They can now attend to their farms and afford simple sanitation and medication materials such as basins, shoes, clothing, soap etc. The children are able to attend school and play with others without feeling embarrassed or stigmatized. Ahadi Kenya Trust also constructs homes and improves on their sanitation.

**Empowerment**  
 Poverty is a major cause of jiggers. To break the poverty cycle, different livelihood projects have been initiated as a way of empowering the community so as to be self reliant. Such projects include, banana farming, bee keeping, rabbit farming, chicken rearing and weaving. They are aimed at improving the lives by creating income and food security. For the children, Ahadi Kenya Trust distributes shoes, books and other education materials.
