

History
 Poverty and poor hygiene are the major causes of jiggers. To completely eradicate jiggers, Ahadi Kenya Trust has been undertaking different activities to change the lives of those affected. The activities include; identifying those infested with jiggers, intervention methods, training and educating the community, empowering the communities and finally rehabilitating the victims back to normal lives. Through all this activities, the main objective is to eradicate poverty, reverse and halt the spread of jiggers.

Rehabilitation
 With income and food security, the recovered jigger survivors are able to lead a normal life. They can now attend to their farms and afford simple sanitation and medication materials such as basins, shoes, clothing, soap etc. The children are able to attend school and play with others without feeling embarrassed or stigmatized. Ahadi Kenya Trust also constructs homes and improves on their sanitation.

1

Poor people living in unhygienic, unsanitary dwellings. Get Jigger infestations resulting from low levels of hygiene and sanitation in their dwellings.

Vicious Cycle of Poverty
 Economic activity reduced by poor health due to jigger infestation, making people poorer and/or unable to rise out of the poverty.
